

Please take this filing as my objection to the petition RM-10521.

As a amateur operator who uses 440 to 450 Mhz FM band, I can see if this proposal is adopted it will cause problems. The proposed frequencies start on the popular national simplex channel, 446.00 MHz and cover other prime simplex frequencies for this band.

This possibility of interoperation between amateurs and the unlicensed users will cause much confusion, if not interference.

Please do not adopt this proposal.
